SUMMARY

Full-stack engineer across TypeScript, React, React Native, Node.js, and Django, with production ownership from database and API through to deployment. Has run projects as sole engineer, cut a client's cloud hosting spend by roughly 55% in a live AWS-to-DigitalOcean migration, and shipped a production mobile architecture upgrade with no user-visible disruption.

EXPERIENCE

Associate Software Engineer

Sep 2025 – Present

Devsinc

Islamabad, Pakistan

- Sole engineer on client projects in agritech, e-commerce, and sports technology, owning Django and Node.js backends, React and React Native clients, Docker environments, GitHub Actions pipelines, and cloud deployment.
- Client-facing on current work: run requirements calls, demos, and scoping with the client, product manager, and designer, then turn outcomes into architecture and sprint delivery.

Junior Web Developer

Mar 2025 – May 2025

SysReforms International

Islamabad, Pakistan

- Delivered three features end to end for a client-facing performance monitoring platform: built the REST API layer in Node.js and Express, extended an existing SQL Server schema with new tables and views, and developed the React and Material-UI frontend with CKEditor rich data entry.

SELECTED PROJECTS

Sports Management Platform | *Django, React Native, Expo, React, DigitalOcean, GitHub Actions*

- Sole engineer for four months on a live platform serving a 100+ user organization, owning the Django backend, React web app, and React Native mobile client.
- Migrated production infrastructure from AWS to DigitalOcean (databases, containers, object storage, DNS), cutting hosting spend by roughly 55% with a single four-hour cutover and no data loss, and rebuilt the GitHub Actions pipelines against the new stack.
- Upgraded the mobile app from Expo 49 to 55 and from legacy React Native to Fabric and TurboModules on iOS and Android in under a month, unblocking store submissions across 40+ screens and eliminating the crash class tied to the old architecture.

Agintel | *React Native, Expo, TypeScript, Redux Toolkit, TanStack Query, Keycloak*

- Sole developer on the mobile companion to a farm management platform; designed the architecture and shipped farm, field, and field-planning workflows with geospatial mapping so growers can run operations from the field rather than a desktop.
- Integrated Keycloak SSO and tuned Redux Toolkit and TanStack Query caching for the low-connectivity rural environments the app runs in.

PBC DXB | *React Native, Expo, React, TypeScript, Stripe, Twilio, CASL*

- Took over the mobile app for a members' e-commerce and trading platform mid-project and ran it solo for four months, meeting every two-to-four week release across 15+ modules serving 500+ members.
- Delivered marketplace flows, Stripe subscription checkout with deep-link returns, Twilio chat and calling, and CASL role-based permissions; led mobile architecture and shipped App Store and Play Store releases.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, C/C++

Backend: Django, Node.js, Express, REST API design, PostgreSQL, SQL Server, MongoDB

Frontend: React, React Native, Expo, Next.js, Redux Toolkit, TanStack Query, Tailwind, Material-UI

Testing & DevOps: Jest, Playwright, Docker & Compose, GitHub Actions, DigitalOcean, AWS, Git

EDUCATION

Bahria University

Bachelor of Science in Computer Science

Islamabad, Pakistan

Feb 2021 – Jan 2025
